

Case Study

Automotive Distribution Center

The Challenge

Facilities often need to communicate where it is safe for occupants to walk or where certain products should be stored. Line striping is a great way to clearly convey these messages. A busy automotive distribution center was continually reinstalling new safety lines due to wear and tear caused by heavy forklift traffic. Each time they installed a new coating, operations would come to a halt for hours of dry time. The facility demanded a better option.

Specific needs:

- Mark direction for foot and forklift traffic
- Provide minimal interruption to operations
- Install a durable, long lasting coating solution

The Solution

After extensive research on various floor coating options, the applicator recommended UVolve® Instant Floor Coatings as the best solution.

- UVolve® is easily applied and cures instantly, allowing for immediate return to full operations
- UVolve® provides a more durable finish than traditional floor coatings for line striping

The Result

Thanks to the fast and efficient UVolve® application process, the automotive distribution center was able to continue operations with minimal disruption during installation. Once installed, UVolve® Instant Floor Coatings provided a durable, attractive finish.

Project Scope

Industry: Automotive Distribution
Location: Limburg, The Netherlands
Application: Line Striping
Substrate: Concrete
System: UVolve® Vivid System
