

Evaluation questionnaire

Delvotest program

20 questions to evaluate the risk on your farm

1

Prevent pathologies

1/ The percentage of clinical mastitis is less than 20 cases per 100 cows a year

YES NO

2/ The average tank somatic cell count never exceeds 200,000 cells / ml

YES NO

2

Respect protocols

3/ Intramammary treatment protocols (number of syringes) are always followed

YES NO

4/ Intramuscular treatment protocols (dose per injection and length) are always followed

YES NO

3

Know withdrawal times

5/ You know the withdrawal time for each treatment

YES NO

6/ You always make sure that the withdrawal time given by the veterinarian, for a given animal, is applied

YES NO

4

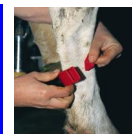

Identify treated animals

7/ All animals being treated are identified by a distinctive sign (wristband...)

YES NO

8/ All animals within the withdrawal time are identified by a distinctive sign (wristband...)

YES NO

5

Separate milk from 4 quarters

9/ The milk from all four quarters is always rejected when a cow is treated, even when only one quarter is treated

YES NO

10/ The milk from all four quarters is always rejected during the withdrawal time, even when only one quarter is treated

YES NO

6

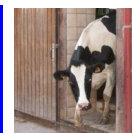

Isolate dry animals

11/ Dry animals are isolated from the herd just after the dry off treatment

YES NO

12/ If the dry period is shorter than five weeks, the milk is always rejected during at least 15 days

YES NO

7

Check for any treatment

13/ In case of intramuscular antibiotic treatment, you always respect the withdrawal time fixed by the veterinarian

YES NO

14/ In case of other antibiotic treatment (for example intra-uterine or intramuscular), you always respect the withdrawal time fixed by the veterinarian

YES NO

8

Transmit instructions

15/ All antibiotic treatments are recorded in a farm register

YES NO

16/ From the farm register, it is always possible to compile a list of all animals being treated

YES NO

9

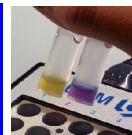

Control tank milk

17/ You have a test to search for antibiotics residues in milk

YES NO

18/ You know when to use a test to search for antibiotic residues

YES NO

10

Evaluate risks

19/ You have previously done a test to evaluate the risk on your farm (such as this one)

YES NO

20/ You have implemented a prevention plan similar to the Delvotest 10 Point Plan

YES NO

Interpretation:

Total: yes no

20 out of 20 times "yes": Congratulations, keep going !

Between 15 and 19 times "yes": You are on the right track, but some risks are still present

Between 10 and 14 times "yes": Contamination risk is high; a number of changes need to be implemented

Fewer than 10 times "yes": High risk, you should urgently implement a risk prevention plan !
