

Climate Change

Together we can make a world of difference

Reducing our own Greenhouse Gas (GHG) emissions - and those of our partners - is essential if we want to tackle climate change and *create brighter lives for all*.

At DSM, sustainability is at the heart of what we do. Which is why we continue to take the lead in tackling GHGs in line with our strategy of delivering on the UN Sustainable Development Goals.

It doesn't end there. By tackling these challenges, we then help address other key societal needs, like reducing hunger (SDG2), enabling good health & wellbeing (SDG3) and clean water (SDG6).

Our commitment

By 2050 we're aiming to reach net zero GHG emissions – inside DSM and across our value chains.

And we continue to measure progress and ensure we stay on track with our Science Based Targets for 2030.

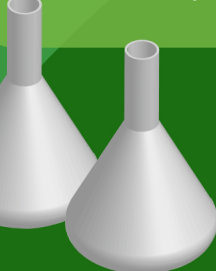

For more on our progress visit dsm.com/sustainability

Everyone in our ecosystem has a part to play if we want to safeguard our collective future.

Here's how it fits together...

Low-carbon innovations

Our R&D teams are creating products using new GHG-reducing chemistry, processes, technologies and materials.

Here are just a few of our achievements so far...

Internal carbon pricing

We steer our investment towards projects with a positive impact on DSM's GHG emissions by putting a value of €100 on every ton of CO2 reduced.

>25
GHG-reduction roadmaps co-developed with key suppliers.

63%
of our portfolio are Brighter Living Solutions.*

>25%
absolute GHG emission reduction versus 2016.

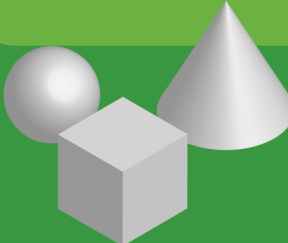

60%
purchased renewable electricity globally.

Engaging our stakeholders

But we can't do it alone, which is why we work and advocate with peers and partners across the value chain, from NGOs to investors.

Renewable energy

This also includes the energy we use. We are on target to making 75% of all our purchased electricity renewable by 2030; and are looking at other alternative sources.

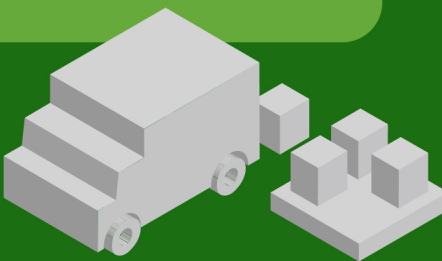

Enabling our customers

We're committed to creating products that enable our customers to reduce their own emissions. In animal farming, products like Bovaer® are reducing GHG emissions in cattle.

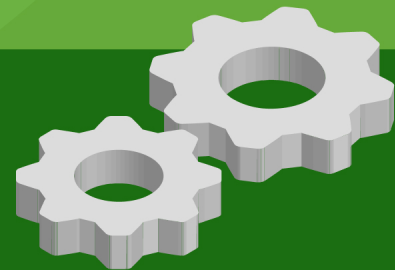

Supplier engagement program

Through our program **CO2REDUCE** we're targeting 200 suppliers to reduce their emissions - for example by switching to renewable electricity.

GHG-reduction program

Supported by a dedicated global team, our manufacturing sites are continually implementing carbon footprint-reduction and energy efficiency measures.

*Brighter Living Solutions are products & services that deliver high performance while providing additional benefits to our society and environments.
