

The test you can rely on We make it happen

At the heart of the milk value chain, Dairies process large quantities of milk from diverse sources every day. With such a high throughput, detection of antibiotic residues could have huge implications. Delvotest® minimizes costs associated with contaminated milk, such as disruption of production, disposal and additional testing. Delvotest® provides efficient acceptance of milk trucks, preventing quality issues related to milk contamination, enabling dairies to have undisrupted milk production.

Consumers are increasingly concerned with food safety and the implementation of stringent quality standards at all levels of the dairy industry. Maintaining milk quality across the industry is therefore vital, to meet consumer and regulatory expectations.

No production or quality issues with Delvotest®

As Dairies are supplied by a large number of different Farmers, it is essential that milk quality is secured throughout the entire milk supply chain. To guarantee that milk is safe to use in dairy production, the Delvotest® microbial test detects the widest range of antibiotic residues up to the allowed Maximum Residue Levels (MRLs) and safe Tolerance Levels (TLs).

DSM also recognizes that time management is crucial for dairy operations. To minimize trucks' waiting time at milk collection centers, we offer Delvotest® fast test, which detects residues of beta-lactam in only 5-7 minutes. Its spectrum for beta-lactams is very similar to the Delvotest® microbial test, which is considered to be the gold standard in the industry. Delvotest® fast test can be used in combination with the Reader+, a device which reads the test results accurately and offers the possibility to trace back test results, leaving no room for mistakes. This combination makes milk testing easy, reliable and efficient.

In short, our Delvotest® range gives you:

- Microbial and fast tests which can be used together, throughout the entire milk supply chain
- High reliability and accuracy - low number of false results
- Detection of the widest range of antibiotics
- Unique microbial test with high sensitivity on tetracyclines
- Detection of antibiotic residues close to international standards
- AFNOR & AOAC certified and national reference test in most countries

Your expert partner

DSM is a global partner to the dairy industry as a leading producer of enzymes, cultures, coagulants, preservation systems and antibiotic residue tests.

DSM has been the market leader in antibiotic residue testing since the introduction of Delvotest®, over 40 years ago. Based on customer insights, we continuously strive to innovate, develop and market easy-to-use and reliable antibiotic residue tests for Dairies, Farmers and Milk Control Laboratories. DSM offers full technical support via local distributors and a comprehensive global sales force. Whatever the stage and scale of your milk production, we will harness our unrivalled expertise in antibiotic residue testing to provide you with the support you need.
