

The test you can rely on We make it happen

As every drop of milk counts, it is vital to have an antibiotic residue testing method that is completely reliable. DSM's easy-to-use Delvotest® ensures that antibiotics - which are necessary for treating herds - will not appear in the milk supply to the Dairies.

Food safety is a growing topic among consumers and is a global challenge. Adherence to the milk buyer's protocol with respect to the usage of antibiotics and residues in milk is therefore of utmost importance. In modern dairy cattle farms, the controlled use of antibiotics is common practice. To ensure peace of mind, DSM provides reliable, easy-to-use antibiotic residue test kits which conform to the latest quality standards. Delvotest® secures an antibiotic-free milk supply to the dairies. Testing costs are negligible compared to a single fine or an unnecessary waste of milk, providing a low cost insurance for your business.

Our solutions for a safe milk supply

Delvotest® microbial test detects the widest range of antibiotic residues with a single easy-to-use test. It is a true helping hand for Farmers who test at individual cow levels by making sure the bulk tank is always free from antibiotic residues. Delvotest® is extensively used in Dairies and Milk Control Laboratories and has become the national reference test in most countries worldwide due to its consistency, reliability, accuracy and performance.

In case you want to double-check the bulk tank or have time constraints before milk collection, our Delvotest® fast test can be used in addition to our microbial test. It detects residues of beta-lactam in only 5-7 minutes and uses the same incubator as the microbial test. Delvotest® fast test's

spectrum for beta-lactams is very similar to our microbial indicator which is considered to be the industry's gold standard. This fast solution makes milk testing easier and quicker when time is of the essence.

In short, the Delvotest® range provides:

- Microbial and fast tests which can be used complementary, throughout the whole milk supply chain
- High reliability and accuracy - low number of false results
- Detection of the widest range of antibiotics
- Unique microbial test with high sensitivity to tetracyclines
- Detection of antibiotic residues close to international standards
- AFNOR & AOAC certified and national reference test in most countries

Your expert partner

DSM is a global partner to the dairy industry as a leading producer of enzymes, cultures, coagulants, preservation systems and antibiotic residue tests.

DSM has been the market leader in antibiotic residue testing since the introduction of Delvotest® over 40 years ago. Based on customer insights, we continuously strive to innovate, develop and market easy-to-use and reliable antibiotic residue tests for farmers, dairies and milk control laboratories.

DSM offers full technical support via local distributors and a comprehensive global sales force. Whatever the stage and scale of your milk production, we will harness our unrivalled expertise in antibiotic residue testing to provide you with the support you need.
