

# The test you can rely on We make it happen

Milk Control Laboratories aim to assure that milk quality meets legal quality standards. The test systems they rely on must be robust, accurate and efficient. DSM's range of antibiotic residue tests helps Milk Control Laboratories to reach maximum throughput in milk testing for antibiotic residues, enabling them to service the dairy industry with high quality control over the entire milk supply chain.

Milk Control Laboratories manage large amounts of milk samples, so tools that support high volumes and that ensure accurate results are extremely important. Our microbial test detects the widest range of antibiotic residues up to the allowed Maximum Residue Levels (MRLs). Delvotest® is extensively used at Dairies and Milk Control Laboratories and has become the national reference test in most countries worldwide, due to its consistency, reliability, accuracy and performance. It reduces the time and costs associated with large scale antibiotic residue testing and complies with national regulations. Our range offers automatic scanning and reading methods that facilitate easy-to-share results.

## Delvo®Scan – automated test readings

Delvo®Scan provides Dairies and Milk Control Laboratories a fully automated option for reading and documenting test results of Delvotest® plates, as well as ampoules. What's more, the software saves the results in a standard format so that they can be easily imported into data management systems. Our Delvotest® range improves the quality of the antibiotic residue testing, offering independent readings and traceability.

## In short, our Delvotest® range gives you:

- Microbial and fast tests which can be used together, throughout the whole milk supply chain

- High reliability and accuracy - low number of false results
- Detection of the widest range of antibiotics
- Unique microbial test with high sensitivity on tetracyclines
- Detection of antibiotic residues close to international standards
- AFNOR & AOAC certified and national reference test in most countries

## Your expert partner

DSM is a global partner to the dairy industry as a leading producer of enzymes, cultures, coagulants, preservation systems and antibiotic residue tests.

DSM has been the market leader in antibiotic residue testing since the introduction of Delvotest®, over 40 years ago. Based on customer insights, we continuously strive to innovate, develop and market easy-to-use and reliable antibiotic residue tests for Dairies, Farmers and Milk Control Laboratories.

DSM offers full technical support via local distributors and a comprehensive global sales force. Whatever the stage and scale of your milk production, we will harness our unrivalled expertise in antibiotic residue testing to provide you with the support you need.
