

Our innovative concepts;

# Fighting gastrointestinal contamination

With a prevalence between 20%-50% in developed countries, and up to 90% in developing countries, a *Helicobacter pylori* infection is a global health concern.

Most consumers are asymptomatic, but those who have symptoms experience ache or burning abdominal pain, nausea, loss of appetite, frequent burping and bloating.

And if left unattended, *H. pylori* infection may lead to more serious gastrointestinal disorders.
