Giving moms and babies a healthy start with Calcium L–Methylfolate (Metafolin®)

Folate (vitamin B9) is an essential vitamin, used by the human body to make new cells and tissues. Folic acid is the form of folate usually found in supplements and fortified foods and it needs to be converted by the body to its active form, L-Methylfolate (MTHF).

Metafolin® increases plasma folate more effectively than folic acid.1

Up to 75% of people in the world may not be able to convert folic acid.2

Metafolin® supports healthy pregnancies

Folate is an essential vitamin for women of reproductive age.

Folate needs increase during pregnancy and lactation and deficiency can result in:

- Infertility3,4
- Neural Tube Defect (NTD)5
- Preterm Birth (PTB)6

Women of childbearing age should ensure adequate folate levels at least 4 weeks before conception.

Folate (vitamin B9) is an essential vitamin, used by the human body to make new cells and tissues. Folic acid is the form of folate usually found in supplements and fortified foods and it needs to be converted by the body to its active form, L-Methylfolate (MTHF).
