

Supporting infant growth with Calcium L-Methylfolate (Metafolin®)

Folate (vitamin B9) is an **essential vitamin**, used by the human body to make **new cells and tissues**. **Folic acid** is the form of folate usually **found in supplements and fortified foods** and it needs to be converted by the body to its active form, L-Methylfolate (MTHF).

Metafolin® increases plasma folate more effectively than folic acid.¹

Up to 75% of people in the world may not be able to convert folic acid.²

L-Methylfolate is the predominant source of folate in breastmilk³

Folate is critical in life phases of growth

MTHF in breast milk is 3.5X HIGHER than other sources of folate

22% Tetrahydrofolate

Low folate intake in infancy can cause:

Metafolin®, a good source of folate for everyone.

We provide mothers with peace of mind by offering nutritional solutions that they can trust. Visit PartnerwithDSM.com to get started.
